**Date:** Monday, January 2, 2017 9:40:13 PM

---

Quick update-hope to have PolRep with monitoring numbers/map out later tonight.

- Met with TCEQ at 1830 hrs to discuss incident status, monitoring and plan for tomorrow. EPA and TCEQ decided on 0.3 ppm (OSHA PEL) for monitoring tonight however, further discussion to follow with the city and TCEQ contractors tomorrow. As of 2130 hrs, START has conducted monitoring at 7 locations (4 homes east of site and south, west and north) with no detects. The police have a 100 ft perimeter with caution tape around the house. Only one side of the incident area is heavily populated (east side).

- A candlelight vigil was held tonight for the deceased residents. I was told it might include discussions of pesticide use but not confirmed. The house is located in a Hispanic neighborhood with limited English.

- The police received a report of another resident potentially using the product and the fire Marshal is being sent to investigate. Not confirmed. Channel 10 was in the neighborhood to cover the story.

- Biggest concern brought up by TCEQ for entry and cleanup is explosion potential.

- A meeting is scheduled for 0830 hrs tomorrow to include the city, TCEQ/contractors and EPA/contractors.

- Talked with CID and will find contact tomorrow at meeting with city. Product rumored to have come from Mexico.

- Animal control being called in for 2 dogs
